

Practical Final

Objective

You will be required to design and build a small network using the two usb nics, two switches and single router in your network racks

Requirements

- Written subnetting scheme that shows the addressing range for an ipv4 network divided into 2 subnets
- configure both routers and switches
- configure native vlan, and vlans for both subnets
- configure the rack for "router on a stick" using subinterfaces for your vlans
- you can either include a screenshot or copy paste running configurations for each switch and router and IP configuration for each usb nic.
- include a screenshot of a successful ping from one nic to the nic

Remember!! the format for this ping is different than your normal ping command:

```
ping <target-IP> -S <source-IP>
```

Submission

Submit a write up including all of the requirements above in a document format of your choosing and upload it to the submission box in Canvas.
